

## Dry Food and Spice Packages

### Dry Food Packages

Printing	Up to 8 colors with Flexography
Materials	BOPP//CPP - BOPP//PE - BOPP//OPP - PE//PE - PE
Size and Thickness	Varying depending on customer demands
Min. Order	Varying depending on customer demands

### Spice Packages

Printing	Up to 8 colors with Flexography
Materials	HDPE - LDPE - CPP - BOPP//CPP - BOPP//BOPP
Size and Thickness	Varying depending on customer demands
Min. Order	Varying depending on customer demands

## Bakery Packages

Printing	Up to 6 colors with Flexography
Materials	CPP / LDPE / BOPP
Size and Thickness	Varying depending on customer demands
Min. Order	Varying depending on customer demands

# Detergent and Cleaning Product Packages

## Detergent Packages

Printing	Up to 8 colors with Flexography
Materials	PE - BOPP//PE - PE//PE - CPP//PE - PET//PE - AL//PET//PE
Size and Thickness	Varying depending on customer demands
Min. Order	Varying depending on customer demands

## Cleaning Product Packages

Printing	Up to 8 colors with Flexography
Materials	BOPP - CPP - PE - PET//PE - AL//PET//PE
Size and Thickness	Varying depending on customer demands
Min. Order	Varying depending on customer demands

# Shrink Film

Shrink films are used in many sectors such as water, beverage, automotive, food, forest products, cleaning materials, etc. Depending on customer demands, they are made in various sizes and printed-unprinted forms.

Shrink films are made of low-density polyethylene raw materials as single-layer or multi-layer in co-extruder machines. Low-density polyethylene raw materials, melted with high heat treatment to turn into a wax, are formed as films by adjusting their dimensions and thicknesses using the molds in the co-extruder machines.

# Lamination Film

They are the films that are laminated to PVC and PET thermoform foils with solvent or solvent-free glue application. PVC foil/pe film, pet foil/pe lamination film.
